INSTALLATION INSTRUCTIONS

This end to stake

This end to stake

This end to stake

This end to stake

This end to stake

1. Tie a simple knot 18" - 24" from either end of the ArborTie®.
2. Wrap this end around tree. Begin a new knot below the knot that was tied in Step 1.
3. Follow motion of ArborTie® as shown, finishing the knot by pulling tightly on points A and B at the same time.
4. Slide the completed knot just up to the knot tied in Step 1. Fasten free end to stake.
5. The ArborKnot® expands as the tree grows, providing secure, girdle free attachment of ArborTie® to tree.

45°

6. Secure long end of ArborTie® to the eye of the stake. Add tension to the ArborTie® by driving the stake into the ground outside of the planting hole at a 45 degree angle to the tree trunk.
7. When driving the stake into the ground, make sure the eye opening is buried. Stake eye should be just even to soil level, as shown above.
8. Stake should be placed outside of planting hole and driven into the undisturbed soil until the ArborTie® is taut.
9. Repeat steps 6-8 for each remaining stake. Stakes should be evenly spaced around the tree base.
