### ARBORTIE® WEBBING

ArborTie is a proven material for staking and guying that is tree-safe, easy to use, and less expensive than traditional tree ties. The soft polypropylene material has a rounded weave that stays strong while preventing unraveling, and doesn't cut into the bark of the tree. ArborTie comes in professional 900 lb. (408 kg) tensile strength ArborTie Green and heavy duty 2,500 lb. (1134 kg) tensile strength ArborTie White to suit the needs of every tree and site. Both are strong enough to resist fierce winds while simultaneously providing enough sway to help the tree develop trunk strength. ArborTie fastens to any stake or anchoring system with traditional nails or knots, and easily expands to accommodate the growing tree when tied with ArborKnot®.

DeepRoot is committed to finding new and progressive ways to integrate trees—and all the benefits that come with them—into cities. We achieve this without compromising street space, parking places, or any other urban non-negotiables.

DeepRoot was founded in 1976 when an industrial designer tripped on an uprooted sidewalk and ruined a new pair of shoes. From these humble beginnings grew a leading urban landscape products supplier, and we continue our work to design the best products to make urban environments hospitable places for the earth's natural functions.
